

iLinc for Learning

Product Overview

iLinc Web conferencing software helps you achieve an immediate improvement in the content, effectiveness, and consistency of your online training programs.

"The first virtual classroom product on the market & still a technology leader."

-Bersin & Associates

iLinc customers, including several hundred private, public, and corporate universities, report that they're able to simulate or surpass the effectiveness of live training with iLinc's interactive and collaborative capabilities. Many companies save enough time and money (just by eliminating travel) to expand the scope of their distance learning programs.

Flexible Training & Testing Options

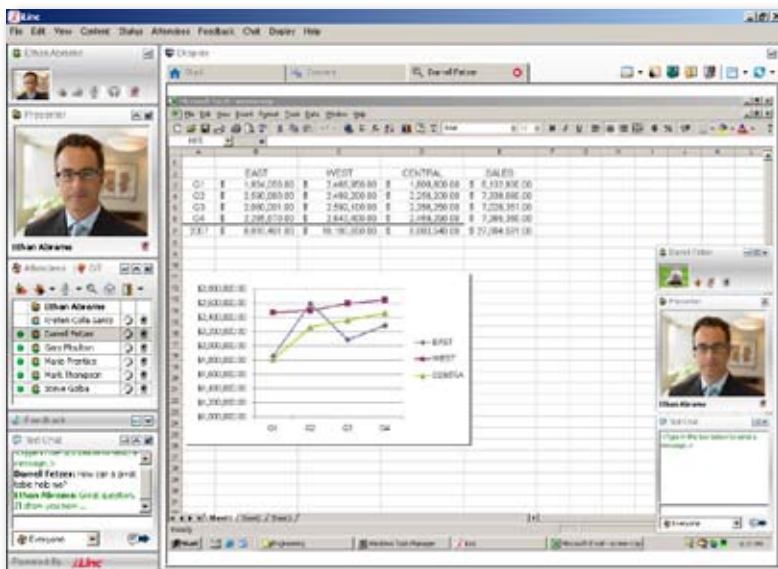

iLinc's easy-to-use, flexible feature set enables you to deliver live distance learning that encourages student participation and interest. Of course, iLinc classes can be recorded, edited, and stored for playback,

creating self-paced content for student review or instructor training. With access to archived training classes — complete with all instructor and student audio and screen interactions — students who cannot attend a live class still benefit from the content and collaborations of the original session.

iLinc includes integrated testing and assessment capabilities that allow for comprehensive in-session or post-session testing. The ideal platform for assessing student capabilities and verifying progress during class, iLinc gives you a simple method for verifying certifications, compliance, and calculating ROI on your software investment.

Technology that Encourages Learning

Joining an iLinc session is absolutely seamless, which makes the distance learning experience more inviting to students. Even if they've never been in an iLinc class before, there are no plug-ins, no firewall issues, and no clunky add-ons to load. iLinc eliminates technical complexities and other barriers-to-use. The technology brings your curriculum to the foreground. They'll remember the course material – not cumbersome procedures or application-related difficulties.

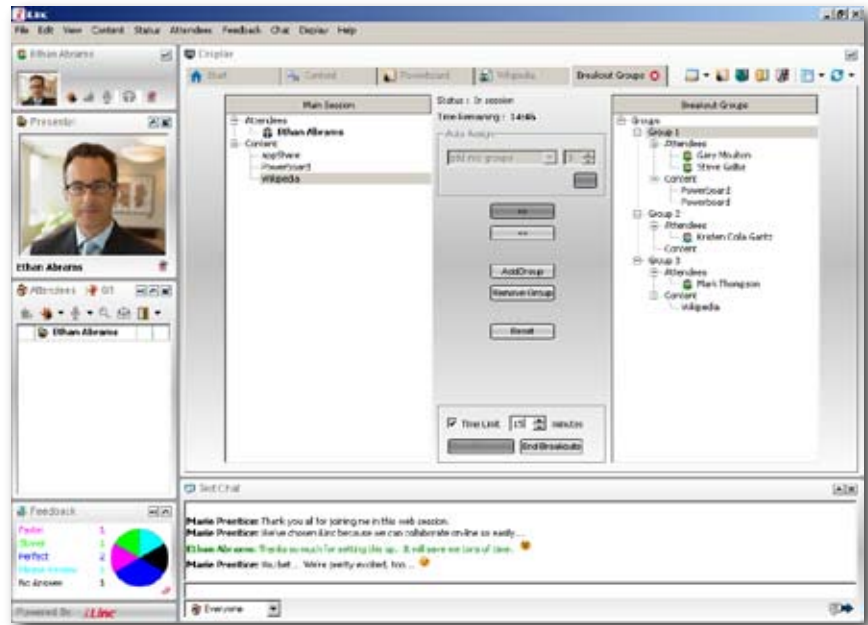

Use iLinc's easy-to-use interface and array of interactive features to keep students engaged in your lesson.

iLinc puts the latest E-learning technologies at your fingertips

- **Application and Desktop Sharing:** Display and interact with any application (e.g. PowerPoint, Word, Excel, etc.) or share the functionality of any student's entire desktop. You can annotate on any application while your students view the markups in real time.
- **Breakout groups:** Instructors can break the class into smaller breakout sessions, either by specific assignment or random configuration.
- **Centralized Control:** iLinc software includes the iLinc Communication Center – an easy-to-use management console. Set up meetings and events with just a few clicks or leverage powerful administration controls to customize iLinc session setup, including registration and security options.
- **Electronic Hand Raising:** Allow students to ask questions by virtually raising their hands. Respond to questions over the phone or through live text chat.
- **Glimpse Student Screens:** Take an over-the-shoulder look at exactly what students are currently viewing.
- **Integrated Audio:** Manage both the Web and the audio portions of your session within the iLinc interface. Mute, dismiss, or put attendees on hold using simple software controls.
- **Multimedia Courseware:** iLinc gives you access to mixed media courseware with third-party authoring support – yet another tool to keep your curriculum lively and interesting to students.
- **Participation Meter:** Monitor the engagement level of your students. You'll know who's idle and who's staying active by the icon next to each name in the class list.
- **Polling, Surveys, and Q&A:** Gain insight into students' comprehension and engagement levels by launching polls or Q&A windows that you preload or create on-the-fly.
- **Synchronized Web Browsing:** Walk students through any live website. Anywhere you click they follow right along with you.
- **Text Chat:** Respond to real-time text chat questions from students and allow students to communicate with each other.
- **Streaming Video:** Simulate a live classroom environment by teaching via live streaming video.
- **Viewable Class Lists:** See which attendees are students and which are assistants. Keep an eye on who has questions, technical problems, or who has left the session.
- **Voice over IP (VoIP):** Take advantage of VoIP technology to eliminate long-distance telephone costs without sacrificing audio quality.
